

Symphony iManage LLPG

The industry leading gazetteer management solution

Symphony iManage

For creating, centralising and managing your data

Symphony iManage Gazetteer Management System (GMS) is the core product within the Symphony Suite of software solutions, providing you with the tools to easily create, maintain and analyse your BS7666 compliant Land & Property Gazetteers.

The solution has been designed to decrease the time taken to perform frequent tasks, utilising a user interface that is intuitive, attractive and fast. It enables the user to simply click on a street or property in order to edit it.

It allows for full Import and Export functionality, bulk updates and searching for USRN, UPRN, Address, Street, Postcode and even Metadata is available. Versions are available in either Oracle spatial format or MS SQL Server with security through database roles.

iManage allows for an accurate, central gazetteer in which your LLPG/CAG data will be displayed geographically in a map window making it easy to see any issues with your dataset.

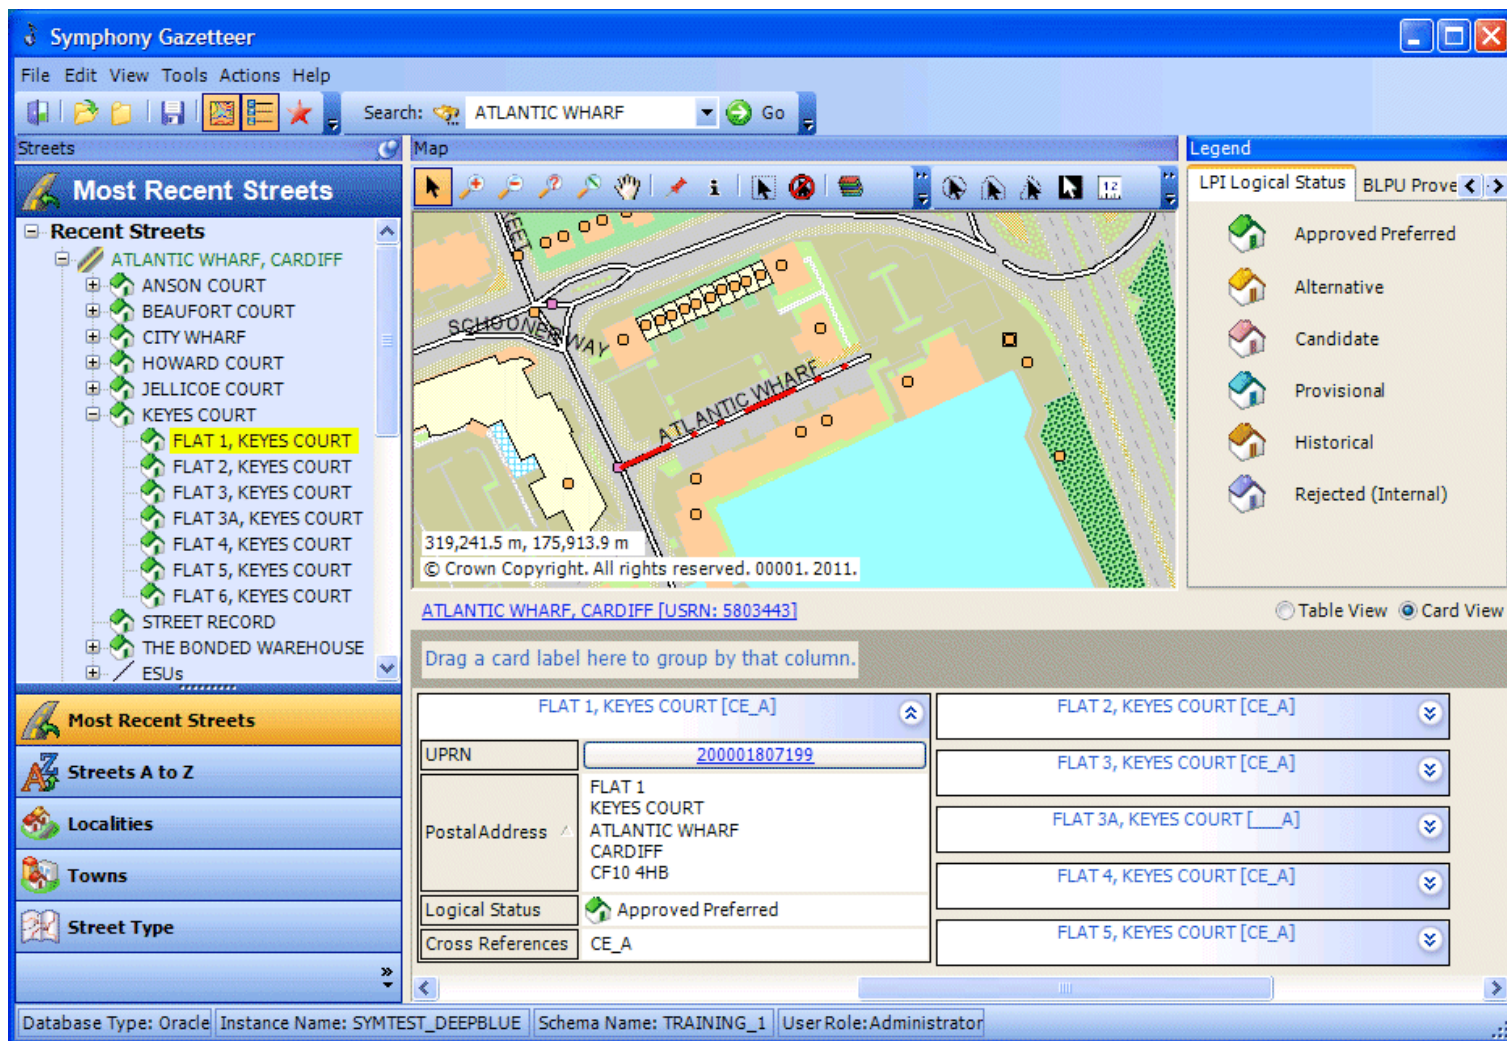

This full integration with the embedded GIS and with a fundamental purpose to improve efficiency, iManage focuses entirely on the needs of the user. It acts as a central hub to allow open access to information and makes it fully usable across an organisation.

Other Symphony iManage Modules

- Street Gazetteer (LSG) – a standard modular component that forms the basis of all other gazetteer data
- Associated Street Data (ASD) or Scottish Road Works Register – Associated Data (SRWR-AD) - data held along side your LSG data, listing elements such as highway authority, footways, private roads and carriageways
- Multiple Authorities – added flexibility of being able to easily switch between displaying data for different local authorities

“The installation of Symphony went really well. I am so impressed with the thought that has gone into making iManage such an excellent product. I have to say it’s the best GMS system I’ve seen.”

- Marie Lilley, Applications Engineer, Bury MBC

Main Features

Everything about Symphony iManage is designed to make the fulfillment of your statutory duties as simple as possible and your LLPG the most useful tool available to your council.

- Fast, customisable user interface – simply click on a street or property in order to edit it
- Ability to move Seed Points
- Powerful tools for ASD maintenance allowing for the exact start and end coordinates or the whole road specification
- Ability to export in DTF 7.3 v3.1, DTF 7.3 v2.1 or both
- Available in either Oracle spatial format or MS SQL Server with security through database roles
- Multi user editing with full audit trail
- Auto correction of invalid characters
- Powerful search facility including the ability to search metadata
- Multiple free form notes field
- Auto update of ward and parish if moving a BLPU
- Customise, create and search on your own abbreviations
- Keeps a list of most recently visited streets for each user with exact street type displaying a different icon and coloured text
- Record your old classifications (pre v3.1) as cross references
- Full Import and Export functionality with partial (change only update) Import/Export for LLPG data
- Fully integrated and interactive map window with tools for drawing, tracing, dividing, merging ESUs and a simple method of assigning ESUs to a street

Symphony iManage Benefits

- Easy to use point-and-click design
- Intuitive, user-friendly interface
- On going compliance to changes in address standards
- A proven reputation with over 90 users
- Purpose built in collaboration with local government and the emergency services
- Increased accuracy using a centrally stored address database
- Enables you to work faster and be more efficient
- The GMS chosen by over 20% of local authorities
- User Group prioritising development work / new functionality
- Built to be future proof - a cutting edge, robust, solution written using the latest Microsoft .NET Framework technology
