

NUMBER ONE FOR GAZETTEERS

# Symphony iSearchWeb

Organisation-wide access to your BS7666 Gazetteer

## Symphony iSearchWeb

Intranet, Internet and organisation-wide feedback

With the advent of e-government and now t-government initiatives, the ability to access and share property, address and geospatial information has never been more important.

To facilitate the sharing of property-based information among business applications, Aligned Assets have produced Symphony iSearchWeb, an easy to use web-based application that allows for organisation-wide access to your NLPG data.

By using iSearchWeb to enable this level of NLPG data exploitation, your whole organisation can increase efficiency whilst saving both time and money.

### Why choose iSearchWeb

- Ease of Deployment
- Organisation-wide access to NLPG data
- Opens up NLPG data – with no training required for users
- Helps identify address discrepancies
- People start thinking UPRN
- Web Service (SOAP) accessible by ANY application
- Maximise your ROI on your corporate gazetteer

### Benefits

- Gives everyone access to the information in the LLPG
- Provides the ability to look up and copy addresses into ANY application
- Seamlessly integrates via the Web Service within ANY application
- Provides the ability to check address cross references with your system to ensure that the linking process is valid
- Feedback option allows for multi-user validation

*“After all the hard work to get our LLPG created, to be able to allow it to be used across the authority is so important. The access that iSearchWeb allows would be good in itself but the ability to get feedback as well makes its twice as good!”*

## Features

- **Find Location** function allows users to search for addresses in their BS7666 gazetteer. The Search Interface allows the user to search for specific addresses by filtering on a combination of UPRN, USRN, Building Name/ Number, Street Name and Postcode, Organisation, Cross Reference, Cross Reference Source
- **Show Details** function allows users to request detailed information about a property by clicking on a hyperlink. Examples are Mail Address, Alternative Addresses, BLP Classification and Cross-references
- **Cut and Paste Addresses** by copying your found address to the clipboard
- **Email Custodian** with any feedback e.g. errors in the addresses
- **API** available for integration to other applications

## iSearchWeb Feedback

A significant feature of iSearchWeb is the feedback form that allows any user to email the custodian directly with any errors in the addresses.

Since the accuracy of address data is essential to the efficient workings of an organisation, this facility allows for a secondary form of address validation that will increase the accuracy, and therefore the value, of the NLPG data.

## iSearchWeb Internet

iSearchWeb has within it an inherent flexibility that allows for its adaptation by web developers, allowing its BS7666 search facility to be included on an organisation's website.

This allows for NLPG based addresses to be searched by an organisation's customers or users allowing them the same level of accuracy that you enjoy.

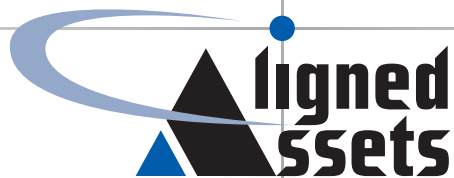

## iSearchWeb Intranet

Often organisations will maintain disparate address data between departments, with each department updating their information, which in turn can result in inaccuracies and duplications, and is an inefficient use of resources.

Internally within an organisation, iSearchWeb works as an intranet web service that allows for all departments to search and access the NLPG data. This allows for an organisation to maintain a single address database that all departments can use, saving both time and money.

Addresses can be simply cut and pasted into other documents, whilst cross references attributed to that address can be used to link into other applications.
